Assignment for Version Control Workshop

1- Make an account with a Git platform (preferably: GitHub.com).
2- Make sure that the account is accessible and public through the internet.
3- Make a new repository and name it as: Hail-VersionControl-workshop.
4- Your repository should include: readme.md file and it should have some paragraph of your choice.
5- Include your chosen license.
6- The more commits with messages the better (average 5 commits).
7- Making a branch that includes its own commits then merging the branch with the master is a bonus.
8- The output of your assignment should be the URL for your repository which should include all the above points. For example:
https://github.com/SaudAljaloud/workshop1
